REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: In the previous Office action, the only rejection was a 102(e) rejection over Birkett et al 2003/0185858. A similar rejection had been made previously over similar disclosure in Birkett et al 2003/0138769, and withdrawn in view of applicant's arguments. The same arguments are convincing here. In addition, it is noted that Birkett discusses generic "HBc", indicating that both human and woodchuck hepatitis were intended as members of the genus. It is possible to pick and choose among the teachings of Birkett, and combine some of the generic teachings on insertion regions with the woodchuck hepatitis sequence to envisage constructs with foreign sequences inserted in positions such as position 71 of SEQ ID NO:38. However, the claim further requires assembly as a hybrid particle. The record indicates an element of unpredictability in particle assembly, and the reference does not have any working example of an assembled woodchuck particle. Therefore, it is concluded that the reference did not anticipate the invention as claimed, and furthermore there was something less than a reasonable expectation of success in assembly of the hybrid woodchuck hepatitis particle based upon the generic teachings of Birkett.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
